Projects

Portfolio Page / React, SCSS
APRIL 2024

Using React, I created a visually appealing page to showcase my projects, with a clean and modern design using SCSS. The page features project thumbnails and links, allowing visitors to easily explore my work.

Pokedex App / React, RESTful
APRIL 2024

Leveraging the RESTful PokeAPI, I developed a functional Pokedex application using React to fetch and display data on various Pokémon. The app features search, and details page, providing an engaging user experience for Pokémon enthusiasts.

New York Times / React, Node, Express
MAY 2024

Using React, I created a replica of the New York Times Games page, complete with interactive puzzles and a sleek user interface. To support the application, I built a robust backend with Node.js and Express, handling data management and user authentication seamlessly.

Education

Athens Area High School / HS Diploma
AUGUST 2019 - JUNE 2023, Athens, PA

In high school, I challenged myself by taking advanced mathematics courses and programming classes, laying a solid foundation for further study in computer science and engineering. This early exposure fueled my passion for problem-solving and coding.
